REFERENCE

Awake Windows by Age

The most useful chart in this kit. Bookmark it.

Age Band	Awake Window	Naps/Day	Bedtime Target
0–6 wks	45–60 min	4–5/day	Variable
6–12 wks	60–90 min	4/day	8–9 p.m.
3–4 mo	90 min	3–4/day	7:30–8:30 p.m.
4–6 mo	2 hrs	3/day	7–8 p.m.
6–8 mo	2.5 hrs	2–3/day	7–8 p.m.
8–12 mo	3–3.5 hrs	2/day	6:30–7:30 p.m.

How to Use Awake Windows

- Start timing the awake window from when your baby WAKES, not from when you want to start the routine.
- Aim to BEGIN the bedtime routine when the awake window is about 15 min from ending — not at the end.
- Overtired means the window was too long. Undertired means it was too short. Adjust by 10–15 min.
- Early morning waking often means bedtime is too late — counterintuitively, earlier bedtime can help.
- Your awake window is a target range, not a strict alarm. Learn your baby's individual sweet spot.

PERSONALITY

The Six Sleep Personalities

Knowing your baby's type changes everything.

The Snacker

Frequent small feeds to feel settled.

Key Approach

Longer gaps between feeds over time.

The Overthinker

Startles easily, very alert.

Key Approach

Deep swaddle, very consistent routine.

The Sensitive Soul

Overwhelmed by noise, light, transitions.

Key Approach

Extra calm-down buffer before crib.

The Night Owl

Genuinely not tired at normal bedtime.

Key Approach

Shift bedtime earlier by 10 min every 2–3 days.

The Catnapper

Wakes after 45 min and can't resettle.

Key Approach

Practice linking cycles, stay close.

The Party Animal

FOMO — stimulation keeps them awake.

Key Approach

Boring, dark, silent exits.

I think my baby is:

NIGHT LOG

7-Day Night Waking Log

Track every night. Progress lives in the data.

Night	Date	Bedtime	Asleep	1st Wake	# Wakes	Morning	Settled?
1							Y N
2							Y N
3							Y N
4							Y N
5							Y N
Waking							
Night #	Wake time	Response	Back asleep in	Notes			

Weekly Pattern Review

Patterns I noticed (same waking time, trigger, improvement?)

Best night this week

Hardest night

What I'll do differently next week

Progress is not linear. One bad night does not undo five good ones.

METHODS

Sleep Method Comparison Guide

Any method works when applied consistently. Pick one, stay with it.

Extinction (CIO)

Cry: High

Speed: 3–5 days

Place baby in crib awake. Full commitment, no check-ins until morning.

Ferber

Cry: Moderate

Speed: 5–7 days

Timed check-ins at increasing intervals. Comfort voice only.

Chair Method

Cry: Low–Mod

Speed: 2–3 weeks

Sit by crib, move chair closer to door every 2–3 nights.

Fading

Cry: Low

Speed: 3–4+ wks

Gradually reduce involvement each night.

Pick Up / Put Down

Cry: Low

Speed: Variable

Pick up when upset, put down when calm. Repeat.

My method decision

I am choosing this method because:

SAFE SLEEP

Safe Sleep Checklist

Run through this every night until it becomes muscle memory.

- ☐ Firm, flat mattress — no incline or wedge
- ☐ Fitted sheet only — no blankets or bumpers
- ☐ Baby on their BACK every sleep
- ☐ Sleep sack instead of loose blanket
- ☐ Room temperature 68–72°F / 20–22°C
- ☐ True blackout achieved
- ☐ White noise on (not inside crib)
- ☐ All LEDs and nightlights covered
- ☐ Sleep space: crib, bassinet, or play yard only

If you ever have a concern about your baby's breathing or safety, contact your pediatrician before resuming any sleep method.

PROMISE

My Sleep Promise

A commitment to your baby — and to yourself.

- ☐ I will use the same bedtime routine in the same order every night.
- ☐ I will watch awake windows and act before overtiredness sets in.
- ☐ I will decide how to handle night wakings before the night begins.
- ☐ I will pause before going in to give my baby a chance to resettle.
- ☐ I will not judge one method on the basis of one hard night.
- ☐ I will stay consistent — especially on the nights it is hardest.
- ☐ I am not just surviving. I am teaching a lifelong skill.

FOR THE NEXT 7 DAYS

Sleep is coming. For both of you.

- ☐ I have read this promise and I commit to working the plan.

[Previous](#)[Home](#)[Next](#)

GAME PLAN

Your First-Week Survival Guide

Night by night. You have everything you need.

Night 1–2

The hardest. Expect resistance. This is normal and expected. Stay the course.

Night 3–4

Most families see a noticeable shift. This is where it turns. Trust it.

Night 5–7

The Non-Negotiables

- Have the plan agreed before nightfall. Not at 2am.
- Be boring at night. No lights, no talking, no eye contact beyond what the method requires.
- Pause 2–3 minutes before entering. Many babies will resettle alone.
- Do not change methods mid-week. Each change resets progress.
- Call it a win every morning you wake up having followed the plan.

How I'll Manage the Hard Nights

When it feels hard, I will remind myself:

My support person is:

What I can do in 5 min for myself:

*You are not just surviving the night.
You are teaching your baby a skill they will use for life.*

FAQ

Parent FAQ

The 6 questions every new mum asks. Answered honestly.

Q How long does sleep training take?

Most methods show meaningful change in 3–7 nights. 'Slow' methods can take 2–3 weeks. The variable is consistency, not the method.

Q When can I start?

Gentle methods (fading, chair) from around 4 months. CIO/Ferber is generally recommended from 6 months. Always check with your pediatrician.

Q My baby cried all night. Did I fail?

No. Night 1 and 2 are almost always the hardest. Most families see a clear shift by Night 3 or 4. One hard night is not a failure.

Q What if my baby is sick?

Pause the method completely. Comfort first, always. Resume when your baby is well for 2–3 days.

Q Do I have to let my baby cry?

No. Chair method and fading involve minimal crying. Choose based on your temperament, not guilt.

Q Partner isn't on board. Now what?

Write the plan down before nightfall. The rules must be identical whether it's 8 p.m. or 3 a.m. Talk before the night, not during it.

NEXT STEPS

What Comes Next

You've started. Now let it build.

You've Completed the Starter Kit

- ☐ Fill in your Quick-Start Plan
- ☐ Set tonight's bedtime routine
- ☐ Start the 7-Day Night Log tonight
- ☐ Read the Sleep Promise
- ☐ Review the Survival Guide before bed

Ready to go deeper?

This Starter Kit is the entry point. The Sleep, Baby. Please. System Planner gives you the full 12-week structured program — one week per chapter, with awake trackers, night logs, method tracking, and weekly reflections for the complete journey.
