The Decision Guide

Five questions. One clear recommendation. Done before dark.

Why this matters

Any sleep training method can work if — and only if — it is applied consistently. The method you half-heartedly try is worse than the gentle method you actually follow every night. This guide helps you choose not the 'best' method in the abstract, but the method that best fits your temperament, your baby's temperament, and your family's current reality.

How to use this section

- 1 Read the 5 Method Cards on the next page — one for each training approach.
- 2 Answer the 5 Decision Questions honestly. Circle your answer.
- 3 Tally your method scores on the Recommendation page.
- 4 Confirm your choice and copy it to your Personalised Plan.

The 5 Methods at a Glance

Method	Cry Level	Speed	Best For
 Extinction (CIO)	High	Fast — 3 to 5 days	Persistent babies; exhausted
 Ferber / Graduated	Moderate	Medium — 5 to 7 days	Most temperaments; parents w
 Chair Method	Low to Moderate	Slower — 2 to 3 weeks	Sensitive babies; parents no
 Fading Method	Low	Slowest — 3 to 4 plus	Gentle approach; adaptable b
 Pick Up / Put Down	Low	Variable — depends on	Young babies 3 to 5 months;

"Decided before dark. Consistent after midnight."

[■ Previous](#)
[■ Home](#)
[Next ■](#)

Extinction (CIO)

Cry: ●●●●●

Speed: ■■■■■

Place baby in crib awake. Do not return until morning or a planned feed. Baby learns to self-settle with full opportunity.

✓ Best for: Persistent babies; exhausted families who need fast res

✗ Not ideal: Highly sensitive babies; parents who struggle with exte

Ferber / Graduated

Cry: ●●●■

Speed: ■■■■■

Check in at increasing timed intervals. Comfort with voice only — no picking up. Intervals increase each night.

✓ Best for: Most temperaments; parents who need to do something dur

✗ Not ideal: Babies who escalate at check-ins; parents who can't kee

Chair Method

Cry: ●●■■■

Speed: ■■■■■

Sit in a chair by the crib. Move chair farther away every 2 to 3 nights. Your presence fades gradually.

✓ Best for: Sensitive babies; parents not ready to leave the room

✗ Not ideal: Babies who are stimulated by parental presence

Fading Method

Cry: ●■■■■

Speed: ■■■■■

Gradually reduce your involvement at sleep onset over time. Each night slightly less help than the last.

✓ Best for: Gentle approach; adaptable babies; parents who want no

✗ Not ideal: Families who need faster results; inconsistent schedule

Pick Up / Put Down

Cry: ●■■■■

Speed: ■■■■■

Pick up when crying peaks. Put down when calm. Repeat until asleep. Your presence is the safety net.

✓ Best for: Young babies 3 to 5 months; high-support-need families

✗ Not ideal: Older babies who are stimulated by being picked up

"Your 2am brain will thank your 2pm brain."

5 Decision Questions

Circle or tick the answer that honestly fits your situation right now.

EMOTIONAL TOLERANCE How do you feel about hearing your baby cry?

- ☐ I can manage extended crying if it means faster results → CIO / FERBER
- ☐ I need to do something — check-ins help me cope → FERBER / CHAIR
- ☐ Crying feels wrong to me — I want minimal distress → CHAIR / FADING / PUPD
- ☐ Any crying longer than a few minutes is not possible for me → FADING / PUPD

TIMELINE How urgently do you need results?

- ☐ Crisis level — I need change within the week → CIO / FERBER
- ☐ Soon — ideally within two weeks → FERBER / CHAIR
- ☐ Patient — I'll take three to four weeks if it's gentler → CHAIR / FADING
- ☐ No rush — baby's comfort is the priority → FADING / PUPD

BABY'S AGE How old is your baby right now?

- ☐ Under 4 months (newborn stage) → PUPD / FADING
- ☐ 4 to 6 months (prime sleep training window) → FERBER / CIO / FADING
- ☐ 6 to 12 months → CIO / FERBER / CHAIR
- ☐ 12 months and older / toddler → FERBER / CHAIR / FADING

"Consistency on hard nights is where progress lives."

■ Previous

■ Home

Next ■

5 Decision Questions — continued

Two more questions then tally your scores on the next page.

BABY'S TEMPERAMENT How would you describe your baby's temperament?

- ☐ Easy-going and adaptable → CIO / FERBER / FADING
- ☐ Persistent and strong-willed → CIO / FERBER
- ☐ Sensitive and easily overwhelmed → CHAIR / FADING / PUPD
- ☐ High energy — stimulated by attention → CIO / FERBER

YOUR CONSISTENCY How consistent can you realistically be?

- ☐ Very — once I commit I don't waver → CIO / FERBER
- ☐ Mostly — I may need a check-in to feel confident → FERBER / CHAIR
- ☐ Variable — life is unpredictable right now → FADING / CHAIR
- ☐ Uncertain — I may need to adjust as I go → PUPD / FADING

How to tally your scores

Each answer above shows which method(s) it points toward. Count how many times each method appears across all 5 questions. The method with the highest count is your recommended starting point. Record your tally on the next page.

"One bad night does not undo five good ones."

Ferber Interval Guide

Timed check-ins at increasing intervals. Comfort with voice only — never pick up.

Check-in Interval Schedule

Wait these intervals before entering. At each check-in: speak calmly, no lights, no picking up. Immediately leave and restart the timer.

Night	Wait 1	Wait 2	Wait 3	Each After
Night 1	3 min	5 min	10 min	10 min
Night 2	5 min	10 min	12 min	12 min
Night 3	10 min	12 min	15 min	15 min
Night 4+	12 min	15 min	17 min	17 min
Night 6+	15 min	17 min	20 min	20 min

The Non-Negotiable Rules

- Never pick baby up during a check-in. Voice and presence only.
- Leave the room immediately after a check-in — even if crying resumes.
- Reset the timer from the moment you leave the room.
- If baby falls asleep during a check-in cycle, do not restart if they briefly stir.
- Stay on the scheduled night's interval — do not shorten because it feels hard.

My interval plan for tonight

"Progress is often messy before it sticks."

Chair Method — Position Schedule

Chair Position Guide

Nights	Chair Position	Your Role
Nights 1–2	Next to the crib	<i>Sit close. Gentle shush. No eye contact.</i>
Nights 3–4	Halfway to the door	<i>Presence only. Very minimal verbal reassurance.</i>
Nights 5–6	Near the door (inside)	<i>Silent presence. No interaction.</i>
Nights 7–8	Just outside the door	<i>Occasional very soft shush if needed.</i>
Nights 9+	Chair removed	<i>Baby settles independently. Method complete.</i>

Chair Method Rules

- Move the chair on the scheduled night — even if the previous night was rough.
- Do not make eye contact after the first 2 nights.
- No patting, stroking, or picking up after position 1.
- If baby climbs out, return them calmly with zero interaction.
- Some babies are stimulated by presence — switch methods if escalating after night 4.

My Chair Schedule

Record tonight's position and any notes:

- ☐ Nights 1–2 — Next to the crib
- ☐ Nights 3–4 — Halfway to the door
- ☐ Nights 5–6 — Near the door (inside)
- ☐ Nights 7–8 — Just outside the door
- ☐ Nights 9+ — Chair removed

"The hard nights are not failed nights."

My Plan — Bedtime Routine & Commitment

My Bedtime Routine — In Order

Fill in the time for each step. Check when completed. This is the sequence — same every night.

☐		Dim lights / transition signal	
☐		Stop stimulating activity — screens off	
☐		Bath or warm wipe-down	
☐		Lotion massage	
☐		Pajamas and sleep sack on	
☐		Feed — dim quiet room (baby not asleep)	
☐		1 to 3 books or songs	
☐		Final goodnight phrase (same words)	
☐		White noise on	
☐		Room fully dark	
☐		Into crib — drowsy but awake	
☐		Parent exits calmly	

Personality-Specific Tip

Refer to your baby's sleep personality (from your plan page) and write the key adjustment below.

My baby's type:

Key adjustment for this type:

My Sleep Training Commitment

- ☐ I chose this method deliberately. I will work it consistently.
- ☐ I will not change methods mid-week. Five nights minimum.
- ☐ I will decide my response before every night begins.
- ☐ I will wait before going in at night wakings.
- ☐ I will not judge the whole plan on one hard night.
- ☐ I will communicate the plan to everyone in the house.

"Sleep is coming — for both of you."

[Next ■](#)

Safe Sleep Checklist

Run through this every night before you start the training routine.

AAP-Aligned Safe Sleep Checklist

Check every item before training begins. If any box cannot be checked, resolve it first.

THE SLEEP SURFACE

- ☐ Firm flat mattress — no incline, wedge, or pillow-top
- ☐ Fitted sheet only — no loose blankets, bumpers, pillows, or positioners
- ☐ Baby placed on their back — every sleep, every time
- ☐ Sleep sack used instead of a loose blanket (correct tog for room temp)
- ☐ Sleep space is crib, bassinet, or play yard — not a swing or car seat

THE ROOM

- ☐ Room temperature between 68 and 72 degrees F / 20 to 22 degrees C
- ☐ True blackout achieved — hand invisible in front of face
- ☐ White noise running at low continuous level — not inside the crib
- ☐ All monitor and device LEDs covered with tape
- ☐ No nightlight, or red-spectrum only

"Two steps forward, one step back. You are still moving forward."

Consistency rating (1-10)

Weekly Reflection

What went well?

What was the hardest moment?

What pattern did you notice?

One change for next week?

Method Assessment

Is your current method still right for your baby?

- ☐ Yes — staying with it. Progress is happening.
- ☐ Mostly yes — small adjustment needed.
- ☐ No — considering a switch (discuss with your partner first).

Notes on method assessment:

"Your baby is learning a skill for life. Keep going."
